

## **Risk Decisions Ltd is pleased to announce the latest Maintenance Update - Predict! Risk Controller 2.17.1**

Risk Decisions Limited is pleased to announce the latest functionality upgrade for the client/server version of Predict! Risk Controller – release 2.17.1. Also included is the latest functionality upgrade for Predict! Risk Analyser 3.5.

These releases are part of our ongoing programme of software development, which aims to ensure that the Predict! software continues to satisfy our customers, evolving risk management requirements.

Customers with Support & Maintenance contracts automatically receive functionality upgrades and maintenance update free of charge. They can also call upon friendly and expert technical support for the Predict! software from our Help Desk.

The key issue resolutions and functionality enhancements for the Risk Controller 2.17.1 update are:

- New unique two-way interface to the Telelogic DOORS requirements tool
- Enhancements to project imports including dynamic database-to-database imports from P3e and Artemis
- Improved performance on Oracle databases
- Enhanced reporting

Customers who would like more information, or who have not received the update should [contact us](#).
